Chemistry Study Guide Acids and Alkalis Essay - 830 Words

In this cheat sheet study guide, you will find the key concepts of acids and bases and acid-base reactions. It summarizes the factors such as electronegativity, polarizability, induction, and resonance-stabilization for determining the acidity of molecules and understating the pKa values and relationship to acid strength. The principle of determining the acid-base equilibrium and main implication of Henderson-Hasselbalch equation are also addressed with specific examples.

- According to the Bronsted-Lowry theory, acids are proton (H⁺) donors and bases are proton acceptors.
- Protons form hydronium ions, H₃O⁺, in water when they bond to polar water molecules.
- In the IUPAC system, a carboxylic acid is named by replacing the e ending of the alkane name with oic acid.

Acids, bases, and pH are concepts that apply to aqueous solutions (solutions in water). pH refers to the hydrogen ion concentration, or the ability of a species to donate/accept protons or electrons. Acids and bases reflect the relative availability of hydrogen ions or proton/electron donors or acceptors.
