Close-up photography, or macro photography, can be a very rewarding form of photographic expression. The great thing about it is that you can do this from your basement at home, if necessary. Of course you can, and should, go outdoors too and setup shots in a forest or at the sea, but you can also setup shots of everyday subjects and shoot them up close.

Getting Started Guide to Close-up Photography

Close-up options are also ideal for zoom compact cameras and bridge cameras with fixed lenses - with these attachments allowing you to improve the minimum focusing capabilities of the camera. Close-up filter function like reading glasses, in essentially acting as a magnifier and reducing the minimum focusing distance of the lens to which they are attached.

Best close-up filters in 2020 | Digital Camera World

An acclaimed professional photographer, with a display of more than 400 beautiful color images, shows how to get close-up and personal with a digital camera. Michael Freeman teaches amateurs how to meet the challenges of this very special type of photography, with plenty of information on the ins and outs of magnification, parallax control, and depth of field.

Macro photography grabs top prize in Close-up Photography ...

Close-up photography: I define close-up photography as taking photos using an accessory that allows your lens to focus more closely to the subject than it otherwise would. It's getting close to your subject, but not as close as you can with a macro lens. For me, this is the area where the most exciting images are to be made.

Getting Up Close with Close-Up Lenses

Close-Up Photography Or Macro? Close-up photography refers to taking pictures of objects at close distances, generally less than two feet. Macro photography is about taking pictures of objects at extremely close distances; the traditional definition says that this occurs when the object itself is the same size in real life as on film, so magnification is 1:1.

The Top 100 Close-up Photographer of the Year

Easily acquire sharp focus on subjects as close as 6 inches to the lens. Working Distance and Focal Length When using a macro lens, focal length influences how close you need to get to your subject - known as working distance. With a greater focal length, you can be further away from your subject and still achieve the effect of extreme closeness.

dsLR-lenses-for-macro-and-closeup-photography

Camera: Canon EOS Digital Rebel XTi Exposure: 0.017 sec (1/60) Aperture: f/2.8 Focal Length: 100 mm ISO Speed: 400 Exposure Bias: 0 EV Flash: Off, Not Fired. Close-up or macro photography is just as much technique as it is luck. That's what makes it fun and unpredictable.

Tips for Better Close-Up and Macro Photography ...

Increasingly, macro photography is accomplished using compact digital cameras and small-sensor bridge cameras, combined with a high powered zoom lens and (optionally) a close-up diopter lens added to the front of the camera lens. The deep depth of field of these cameras is an advantage for macro work.
