2. Positioning. Turn on the enlarger and alter the aperture ring of the lens until the brightest image is projected onto the baseboard. Focus the image on the masking frame. Turn the lens's aperture ring until you feel two clicks and see a slight darkening of the projected image. This should be 2 stops darker than the lens's maximum aperture. 3.

The main use of a darkroom is to print your photographs in the traditional way. Its called a darkroom because it is almost completely dark – apart from a red light called a "safe light". This is really important because it allows you to handle the light-sensitive materials necessary to make traditional darkroom prints.

Because you need a light-tight room, a large closet, basement or any room without a window is a good place to start. If any light comes in, you risk damaging every photo you try to develop. A good test is to close the door and shut off the light. Let your eyes adjust. If any light is coming in, you need to pick a new room or patch the light leak.
