The Lampyridae are a family of insects in the beetle order Coleoptera with more than 2,000 described species. They are soft-bodied beetles that are commonly called fireflies, glowworms, or lightning bugs for their conspicuous use of bioluminescence during twilight to attract mates or prey. Fireflies produce a "cold light", with no infrared or ultraviolet frequencies.

LIGHTNING BUG - crossword answers, clues, definition ...

Like all other beetles, lightning bugs have hardened forewings called elytra, which meet in a straight line down the back when at rest. In-flight, fireflies hold the elytra out for balance, relying on their membranous hindwings for movement. These traits place fireflies squarely in the order Coleoptera.

10 Fascinating Facts About Fireflies and Lightning Bugs

Lightning Bugs are harmless critters that can be caught with a Bug Net and do not normally interact with the player in any other way, except in that they can be killed by both players and enemies. They have 5 health and usually serve as ambient entities in Terraria. Lightning Bugs spawn during the night above Hallowed Grass blocks.

Lightning Bug: October Song Album Review | Pitchfork

The Lightning Bug™ is based upon the science of lightning. There are two components of lightning; the bright white flash everyone wants to capture and the unseen infrared light that always precedes it. The Lightning Bug™ uses a high-speed photodiode sensor optimized to the infrared burst that occurs just before a lightning strike.

MK Controls

Lightning bugs or fireflies are insects found in fields and yards as spring turns to summer. The male lightning bugs fly around and "flash" to attract females to mate with. Lightning bug larvae live in moist places on the ground; the mature insects eat earthworms and slugs, among other things.
