Pastoralism is a form of animal husbandry where domesticated animals known as livestock are released onto large vegetated outdoor lands for grazing, historically by nomadic people who moved around with their herds. The species involved include cattle, camels, goats, yaks, llamas, reindeer, horse and sheep. Pastoralism is found in many variations throughout the world, generally where environmental characteristics such as aridity, poor soils, cold or hot temperature, and lack of water make crop gr

Le Pastoralism And The Formation Of Near Eastern ...

Traditional pastoralism is the main sheep production system of the semi-arid rangelands, where there is unpredictable climate and economic dependence on livestock increases as rainfall decreases. Traditional pastoralism can be categorised by the degree of movement of animals from highly nomadic through transhumance to agropastoral (FAO, 2001).

Pastoralists by their nature are flexible and opportunistic, and can swap between systems, as well as have multiple systems in one overall productive ...

Le Pastoralism And The Formation Of Near Eastern ...

Pastoralism is a knowledge-intensive system that needs to operate with real-time intelligence (Kaufmann, 2007). Existing drought early warning systems (DEWS) have sometimes developed as knowledge management systems, systematically collecting and analyzing information on pasture quality, market prices, and several other indicators. Although very useful, this is still happening within a framework that understands environmental instability only as a problem.

The Rise of Pastoralism in the Ancient Near East

Pastoralism in Kenya has been neglected and understood. A new government Ministry was formed in 2008 aimed to create policy and institutional change. A new Working Paper by Izzy Birch and Mohamed Elmi tells the story of the Ministry.

Pastoralism – Future agricultures

Pastoralism has shaped livelihoods and landscapes on the African continent for millennia. Mobile livestock husbandry has generally been portrayed as an economic strategy that successfully met the challenges of low biomass productivity and environmental variability in arid and semi-arid environments.
